

**SSTAR** intends to construct a 43,000 square foot facility that will increase capacity of its services for patients with mental health & substance use disorders. The facility will house a triage and assessment center; a federally qualified health center that will house primary care facilities; individual, family and group counseling rooms, child psychiatry, and a medication assisted treatment center for those with opiate and alcohol addiction. In addition, this facility, along with additional funding from SAMSHA, will allow SSTAR to develop a state-of-the-art center for diagnosing the co-occurring disorders of mental health and substance abuse and provide a comprehensive integrated treatment program. The facility is also designed to remain flexible to adapt to changing best practices for treating this increasingly complex population.

## Location

The center will be built at property newly purchased by SSTAR at 75-77 Weaver Street in Fall River. Located in a mixed industrial and commercial use area, this site is perfectly suited for a health center.
